When the multiplication is displayed in a **horizontal line**:

- Add the same number of zeros at the end of the given number as there are zeros in the power of 10.

When the multiplication is displayed in a **vertical algorithm**:

- Move each digit of the given number as many places to the left as there are zeros in the power of 10.
- Add zeros as place holders in the vacated places.

Skill 6.2 Dividing a large number by a power of 10.

- Remove as many zeros from the end of the given number as there are zeros in the power of 10.

Hint: If the division is written as a fraction, simply cross off respective zeros from the top and bottom of the fraction.

 $= 850$

Any division can be written as a fraction.

Simplify by dividing both the numerator and denominator by 1000.

Cross off the respective zeros.

Skill 6.3 Multiplying a large number by a single digit.

- Multiply the number by the single digit working from right to left.
- If there is a 'carry over': First multiply.
Then add on the carry over.

Q. $4019 \times 7 =$

A. $4019 \times 7 = 28,133$

Units: $7 \times 9 = 63$

63 units = 6 tens and 3 units \Rightarrow 3 units
Carry the 6 tens to the next column.

Tens: $7 \times 1 = 7, 7 + 6 = 13$

13 tens = 1 hundred and 3 tens \Rightarrow 3 tens
Carry the 1 hundred to the next column.

Hundreds: $7 \times 0 = 0$

$0 + 1 = 1 \Rightarrow$ 1 hundred

Thousands: $7 \times 4 = 28 \Rightarrow$ 28 thousand

Skill 6.4 Dividing a large number by a single digit.

MMBlue 1 1 2 2 3 3 4 4
MMGreen 1 1 2 2 3 3 4 4

- Divide from left to right across the digits one at a time.
- If any result is less than 1: Cross off the number being divided into. 'Carry over' this amount to the next column. Add on the carry. Then try dividing again.

Q. $7168 \div 8 =$

A. $7168 \div 8 = 896$ Divide 8 into 7.

$$\begin{array}{r} 896 \\ 8 \overline{) 7168} \end{array}$$

8 doesn't divide into 7, so 'carry over' the 7 groups of 1000 and make 71 groups of 100.

8 divides into 71 eight times with 7 remainder. Write an 8 above the 1 and carry the remaining 7 groups of 100 to the tens column to make 76 tens.

Divide 8 into 76.

8 divides into 76 nine times and 4 remainder. Write a 9 above the 6 and carry the remaining 4 groups of tens to the units column to make 48 units.

Divide 8 into 48.

8 divides into 48 six times and 0 remainder. Write a 6 above the 8.

Read as: 7168 divided by 8

OR How many times can 8 be taken from 7168?

OR How many 8's go into 7168?

Skill 6.5 Multiplying a large number by a multiple of 10.

- Consider the zeros as making groups of 10's or 100's and place them at the end.
- Then multiply by the remaining digit as though it was a unit.

Q. $554 \times 300 =$

A. $554 \times 300 = 166,200$

Consider 300 as 3 groups of 100.

Skill 6.8 Dividing a large number by a two-digit number (1).

MMBlue 1 1 2 2 3 3 4 4
MMGreen 1 1 2 2 3 3 4 4

- Work from left to right.
- Break down the division into smaller divisions by dividing into only as many digits as you need to get an answer greater than 1.
- It may be difficult, so guess the number of divisions and multiply your guess to check.
- Subtract your answer from the original number to get the remainder, which must be less than the number you are dividing by.
- Continue in this way by bringing down the next digit to make the next number to divide into.
- Repeat until the result of the subtraction is zero.

Q. $9690 \div 15 =$

A. $9690 \div 15 = \mathbf{646}$

$$\begin{array}{r}

 \underline{90} \\
 69 \\
 \underline{60} \\

 0
 \end{array}$$

Start at the left.

9 is too small to divide 15 into, so consider 96.

Divide $96 \div 15 = ?$

6 is a good guess.

Check by multiplying $6 \times 15 = 90$

Subtract $96 - 90 = 6$

Write 6 above the 6.

Bring down the 9.

Divide $69 \div 15 = ?$ (Guess 4)

Check by multiplying $4 \times 15 = 60$

Subtract $69 - 60 = 9$

Write 4 above the 9.

Bring down the 0.

Divide $90 \div 15 = 6$ (No remainder)

Write 6 above the 0.

Skill 6.9 Multiplying a whole number by a large multiple of 10.

- Consider the zeros as making groups of 10's or 100's and place them at the end.
- Multiply by the unit digit first, working from right to left.
- Then multiply by the ten digit, working from right to left.
- Add the results last.

Q. $703 \times 2500 =$

A. $703 \times 2500 = 1,757,500$

Consider 2500 as 25 groups of 100.

Work with the 25 first.
Multiply 703 by 5.
Then multiply 703 by 20.
Add these results.

To show we want groups of 100,
place two zeros after 17,575.

Skill 6.10 Dividing a whole number - answer as a terminating decimal.

MMBlue 11 22 33 44
MMGreen 11 22 33 44

- Line up the decimal point in your answer.
 - Place a decimal point and more zeros at the end of the whole number.
 - Divide into the whole number and continue until you get an exact division with no remainder.
- Hint: When no decimal point is shown it is always placed on the far right of the number.*
